

**BioBalance 4 Women**<sup>®</sup> was created with a unique view of Women's Health by St. Louis Gynecologist, Dr. Kathy Maupin. Women are looking for the source of physical problems that begin after age 36. BioBalance evaluates the source, and replaces missing hormones with bio-identical, non-oral estradiol and testosterone. Our patients' most consistent comment after their first treatment is, "I have my life back!" So, what is the "secret"?

Testosterone. For women? Absolutely! What many women don't know is that testosterone is the missing hormone that contributes to essential qualities of a woman's life, including thought process, libido, bone density, muscle mass, and mood. In the normal aging process, levels of both hormones drop and cause the undesirable symptoms that cause the mind and body to slip away. Unlike oral, topical, or vaginal hormones, BioBalance<sup>™</sup> bio-identical hormone pellets placed under the skin replace exactly what the body has lost.

All estrogen and testosterone replacement is not the same! BioBalance<sup>™</sup> pellet hormone replacement does not have the same risks or side effects as oral hormonal therapy. If you want to return to the person you were before your 40s, call BioBalance for a hormonal evaluation and consultation, and see if this therapy is what you have been looking for!

**BioBalance 4 Men**<sup>™</sup> is a command performance requested by my female patients who want their husbands to share the same transformation they have experienced.
